C O N T E N T S

1. WARNINGS AND PRECAUTIONS FOR SAFETY

Please observe the following safety precautions in order to use safely and correctly the refrigerator and to prevent accident and danger during repair.

1. Be care of an electric shock. Disconnect power cord from wall outlet and wait for more than three minutes before replacing PCB parts.
   Shut off the power whenever replacing and repairing electric components.

2. When connecting power cord, please wait for more than five minutes after power cord was disconnected from the wall outlet.

3. Please check if the power plug is pressed down by the refrigerator against the wall.
   If the power plug was damaged, it may cause fire or electric shock.

4. If the wall outlet is over loaded, it may cause fire.
   Please use its own individual electrical outlet for the refrigerator.

5. Please make sure the outlet is properly earthed, particularly in wet or damp area.

6. Use standard electrical components when replacing them.

7. Make sure the hook is correctly engaged.
   Remove dust and foreign materials from the housing and connecting parts.

8. Do not fray, damage, machine, heavily bend, pull out or twist the power cord.

9. Please check the evidence of moisture intrusion in the electrical components.
   Replace the parts or mask it with insulation tapes if moisture intrusion was confirmed.

10. Do not touch the icemaker with hands or tools to confirm the operation of geared motor.

11. Do not let the customers repair, disassemble and reconstruct the refrigerator for themselves.
    It may cause accident, electric shock, or fire.

12. Do not store flammable materials such as ether, benzene, alcohol, chemicals, gas, or medicine in the refrigerator.

13. Do not put flower vase, cup, cosmetics, chemicals, etc., or container with full of water on the top of the refrigerator.

14. Do not put glass bottles with full of water into the freezer.
    The contents shall freeze and break the glass bottles.

15. When you scrap the refrigerator, please disconnect the door gasket first and scrap it where children are not accessible.

4. OPERATION AND FUNCTIONS

4-1. Display

4-1-1. FRS(N)-U20IA

INPUT	CONTROL OBJECT
FRZ.TEMP, REF.TEMP	Inner Control (Lamp-LED)

CONTENTS	REMARKS
	Temperature adjustment button for freezer compartment.
	Temperature adjustment button for refrigerator compartment.

1. "FRZ.TEMP" Button
 1) Temperature control of Freezer compartment
 2) 5 step mode of successive temperature mode.
 3) Initial mode by power input : "3"
  ※Whenever pressing button, setting is repeated in the order of
    Medium(3) → Medium Max(4) → Max(5) → Min(1) → Medium Min(2).

Temperature Chang	Min	Medium Min	Mid	Medium Max	Max
Temp indication	1	2	3	4	5

2. "REF.TEMP" button.
 1) Temperature control of Refrigerator compartment
 2) 5 step mode of successive temperature mode.
 3) Initial mode by power input : "3"
 ※Whenever pressing button, setting is repeated in the order of
    Medium(3) → Medium Max(4) → Max(5) → Min(1) → Medium Min(2).

Temperature Change	Min	Medium Min	Mid	Medium Max	Max
Temp indication	1	2	3	4	5

 ※ The actual inner temperature varies depending on the food status, as the indicated setting
    temperature is a target temperature, not actual temperature within refrigerator.
 ※ Refrigeration function is weak in the initial time.
    Please adjust temperature as above after using refrigerator for minimum2~3 days.

4-1-2. FRS(N)-U20DA / EA / FA / GA

INPUT	CONTROL OBJECT
Front PCB button FREEZER SET, REFRIGERATOR SET SUPER FREEZER, SUPER REFRIGERATOR RESET FILTER, WATER / ICE, ICE MAKER LOCK ,LOCK	FCP C-LED

CONTENTS	REMARKS
1. Display control

FCP-LED	Control
88 DISPLAY (SET TEMP.)	Initial mode : Freezer & Refrigerator set→ Medium (-19℃/4℃)
SUPER FREEZER,SUPER REFRIGERATOR ICON	Dial
FUZZY, DEODORIZER ICON	Always ON
WATER / CUBED ICE/ CRUSHED ICE ICON	Dial
LOCK ICON	Dial
ICE MAKER LOCK ICON	Dial
FILTER CHANGE ICON	After six month, LED ON

2. "FREEZER SET" Button
 1) Temperature control of freezer compartment
 2) 7 step mode of successive temperature mode.
 3) Initial mode by power input : "Medium(-19℃)"
  ※Whenever pressing button, setting is repeated in the order of
   Medium (-19℃) → Medium Max 1 (-20℃) → Medium Max 2 (-21℃) → Max (-22℃)
    → Min (-16℃) → Medium Min 2 (-17℃) → Medium Min 2 (-18℃).

  Letters are indicated on 88 Display LED

Temperature Change	Min	Medium Min 1	Medium Min 2	Medium	Medium Max 1	Medium Max 2	Max
Temp indication	-16℃	-17℃	-18℃	-19℃	-20℃	-21℃	-22℃

 3. "SUPER FREEZER" Button
   When this mode is chosen, the icon (FREEZER QUICK) is ON.

CONTENTS	REMARKS

4. "REFRIGERATOR SET" button.

1) Temperature control of Refrigerator compartment

2) 5 step mode of successive temperature mode.

3) Initial mode by power input : "Medium (4℃)"

※ Whenever pressing button, setting is repeated in the order of
Medium (4℃) → Medium Max (3℃) → Max (2℃) → Min (6℃) → Medium Min (5℃).

Letters are indicated on 88 Display LED

Temperature Change	Min	Medium Min	Mid	Medium Max	Max
Temp indication	6℃	5℃	4℃	3℃	2℃

5. "SUPER REFRIGERATOR" button.

When this mode is chosen, the icon (REFRIGERATOR QUICK) is ON.

6. "WATER / ICE" button

1) Select Water / Cubed Ice / Crushed Ice.

2) Icon lights up to show your selection is on.
Initial mode by power input : "Water" mode.

3) The mode of Cubed Ice or Crushed Ice continues for 1 hour and then changes
to Water. (Water icon turns ON)

7. "ICE MAKER LOCK" button

1) Start by pushing "ICE MAKER LOCK" button
① "ICE MAKER LOCK" icon is on
② "WATER" icon is always on

2) Stop by pushing "ICE MAKER LOCK" button again
① "ICE MAKER LOCK" icon is off
② "WATER" icon is on

8. "RESET WATER FILTER" button

1) The normal (ICON OFF) is on for 6 month after are first power input.

2) After sic months, icon is ON.

3) How to reset Filter information
① Push the "RESET WATER FILTER" button for 3 seconds after change.

9. "LOCK" button

1) This button stops operation of different button.
① "LOCK" icon is on
② Press this button to lock out this case and to keep temperature and
function setting.

2) Push "LOCK" button again for more than a second to stop it.

※ The actual inner temperature varies depending on the food status, as the indicated setting
temperature is a target temperature, not actual temperature within refrigerator.

※ Refrigeration function is weak in the initial time.
Please adjust temperature as above after using refrigerator for minimum2~3 days.

REFERENCE : Please wait for 2-3 seconds in order to take final ice or drops of water when taking out cup from the pressing switches after taking ice or water.

4-2. Defrost Mode

INPUT	CONTROL OBJECT
1. Defrosting Cycle	1. Comp 2. F-Fan 3. R-Fan 4. D-Heater

CONTENTS	REMARKS

1. Defrost Mode

Pre-Cool

Pre-Cool
1) Time : 50 minutes
2) Comp , F-fan : ON
         R-fan : Control
         D-HTR : OFF
3) If F-sensor ≤ -27℃, then Pre-Cool becomes. OFF

Heater Defrosting

Heater Defrosting
1) Comp, F-fan, R-fan : OFF
              D-HTR : ON
2) Time limit
    30 seconds : Heater is ON regardless of D-sensor
                    temperature right after defrosting start
    30 minutes : in case of D1- Error
    80 minutes : in normal control state
3) If D-sensor ≥13℃, Heater Defrosting is OFF

Pause

Pause
Time : 7 minutes
Comp, F-fan, R-fan, Heater etc. : OFF

Fan-Delay

Fan-Delay
1) Time : 5 minutes
   Comp : ON and F-fan, R-fan, Heater : OFF

2.The defrost mode start with the following conditions

 1) Total operation time of comp. becomes : 6,8,10,……… 24 hours.
  ① Comp. operating rate : more 85%
  ② Total door open time : 2 minutes
    (Any door, F or R open time is over 2 minutes.)
  ③ Any error mode : R1, F1, D1, F3, RT/S, Door-switch etc.)

 2) Defrosting mode starts unconditionally as long as total comp. work time is
   24 hours, even if the above conditions 1) are not satisfied.

 3) Defrosting mode starts immediately as long as total time of [comp. ON +
   comp. OFF] is over 60 hours, even if the above 1) and 2) conditions are not
   satisfied.

3. In providing initial power (or returning power failure)

  If D-sensor temp. ≤ 3.5℃, defrosting mode starts .

CONTENTS	REMARKS

4. Flow Chart of Defrosting Start

```

17
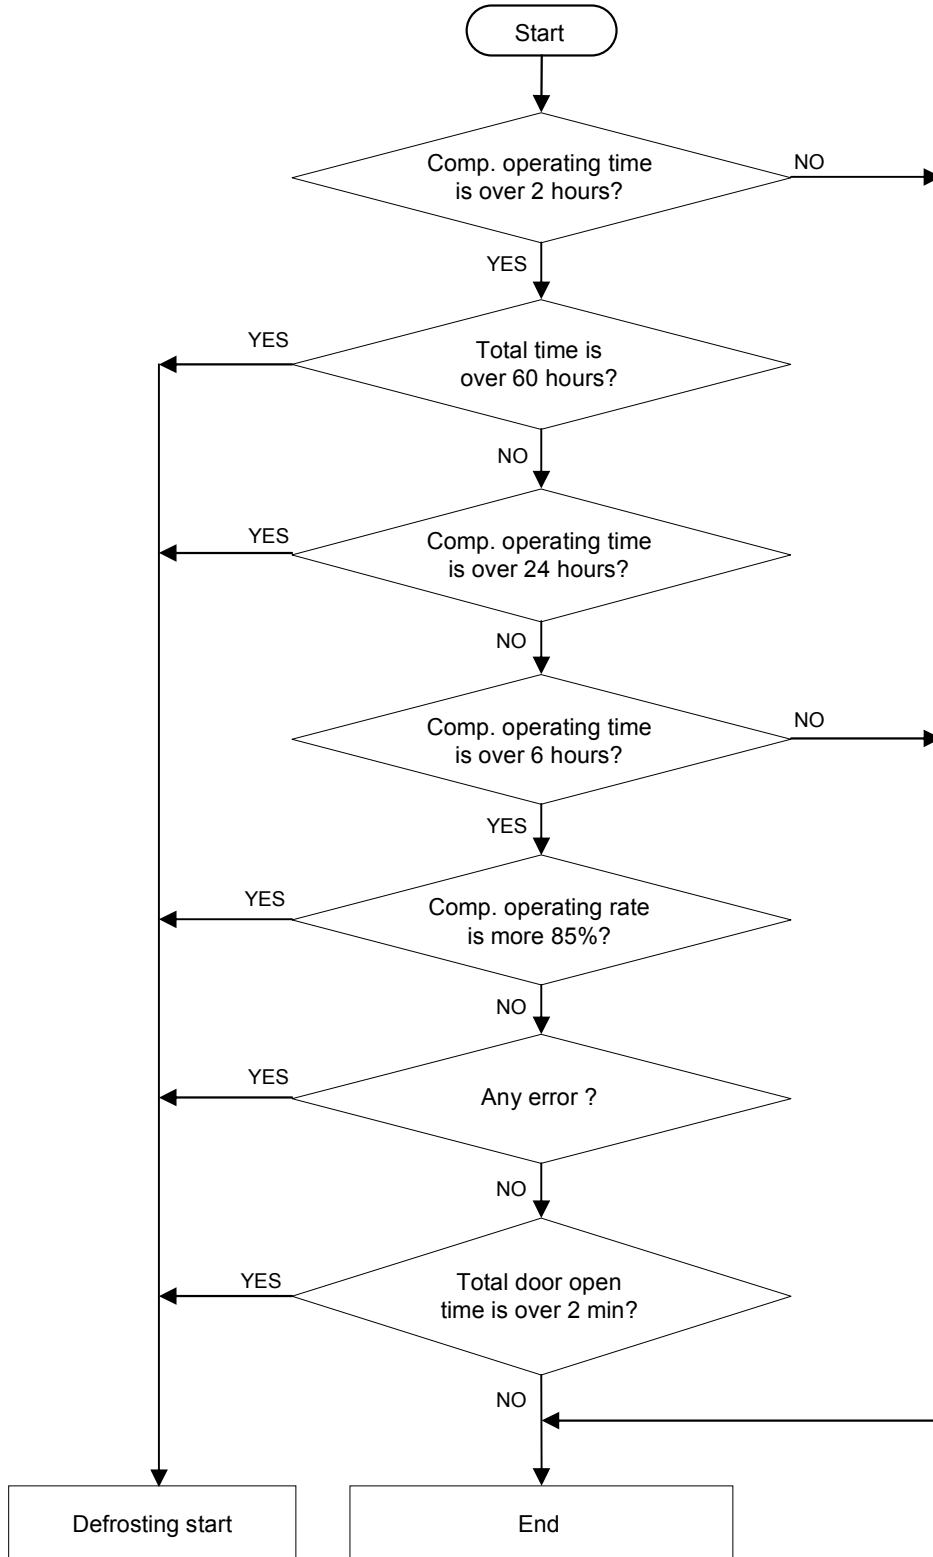

4-3. c (Forced Defrosting) Mode

INPUT	CONTROL OBJECT
1. Defrosting Cycle	1. Comp 2. F-Fan 3. R-Fan 4. D-Heater

CONTENTS	REMARKS

1. A/S Defrosting Mode (Heater defrost → Pause → Fan Delay)

Heater Defrosting

Heater Defrosting
1) Comp, F-fan, R-fan : OFF
      D-HTR : ON
2) Time limit
   30 seconds : Heater is ON regardless of D-sensor temperature right after defrosting start
   30 minutes : in case of D1-Error
   80 minutes : in normal control state
3) If D-sensor ≥ 13℃, Heater Defrosting is OFF

Pause

Pause
Time : 7 minutes
Comp, F-fan, R-fan, Heater etc. : OFF

Fan-Delay

Fan-Delay
1) Time : 5 minutes
   Comp : ON
   F-fan, R-fan, Heater : OFF

2. How to start
 1) Push "REF.TEMP" button 5 times while pushing "FRZ.TEMP" button simultaneously.
    --------- FRS-U20IA
 2) In "LOCK" mode, push "REFRIGERATOR SET" button 5 times while pushing "FREEZER SET" button simultaneously. ------ FRS(N)-U20DA

3. How to proceed
 1) Delete Pre-cool mode. (Others are same as normal defrosting)
 2) Heater is ON regardless of D-sensor temp. at first 30 seconds.
 (Check of defrosting current)

4-4. Fan Voltage of Control Mode

INPUT	CONTROL OBJECT
1. F-Sensor 2. R-Sensor	1. F-FAN, R-FAN, C-FAN

CONTENTS	REMARKS

1. Fan voltage of control mode

FAN	F-FAN	R-FAN	C-FAN
Voltage	13 V	13 V	13 V

※ Refer to the 5-4. (Fan Function)

4-5. Louver Heater Control

INPUT	CONTROL OBJECT
1. Comp	Louver Heater

CONTENTS	REMARKS
It is linked with comp.	

4-6. Buzzer or Alarm Control

INPUT	CONTROL OBJECT
1. Control (Inner or F-PCB) buttons 2. Door Switch 3. Initial Power Input	Buzzer

CONTENTS	REMARKS
1. Buzzer sounds if any button of Inner Control is pushed. 2. Buzzer sounds 4 times 3 seconds after initial power input. 3. Buzzer sounds for 3 or 1 times in case of A/S forced defrosting and short (pull down) operation or explanation mode. 4. If door is open, buzzer sounds after every 1 minutes for 5 minutes (Door open alarm)	

4-7. Control of Interior Lights (FRS(N)-U20DA / EA / FA / GA)

INPUT	CONTROL OBJECT
1. Refrigerator door switch 2. Freezer door switch 3. Home bar door switch 4. Dispenser switch	Lamp

CONTENTS	REMARKS

1. Control refrigerator compartment lights
   R-Lights turn ON/OFF by R-door switch ON/OFF
 	
 (※ For 10 minutes after sensing door open, the lights turn off automatically through door close is not sensed.)
 	
2. Control of freezer compartment lights.
   F-Light turn ON/OFF by F-door switch ON/OFF
 	
 (※ For 10 minutes after sensing door open, the lights turn off automatically through door close is not sensed.)
 	
3. R-lights ON/OFF by home bar door switch ON/OFF. (for only model with home bar)
   R-lights turn ON for 10 minutes after sensing home bar door switch open.
 	
4. Dispenser lamp control (for only model with water/ice dispenser)
   Dispenser lamp turns ON/OFF by Dispenser switch.
   Dispenser lamp turns ON for 4 seconds after sensing switch close.	

4-8. Demonstration
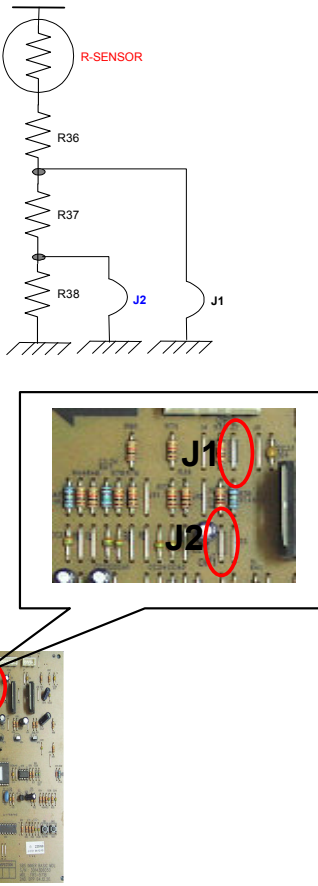

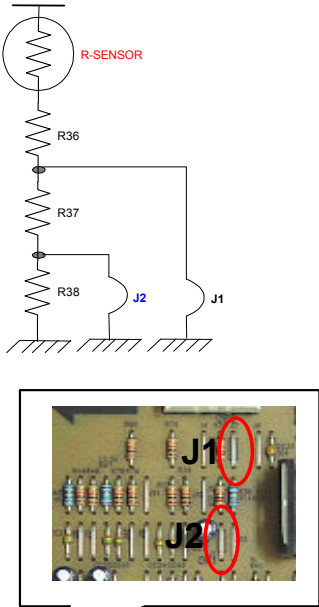

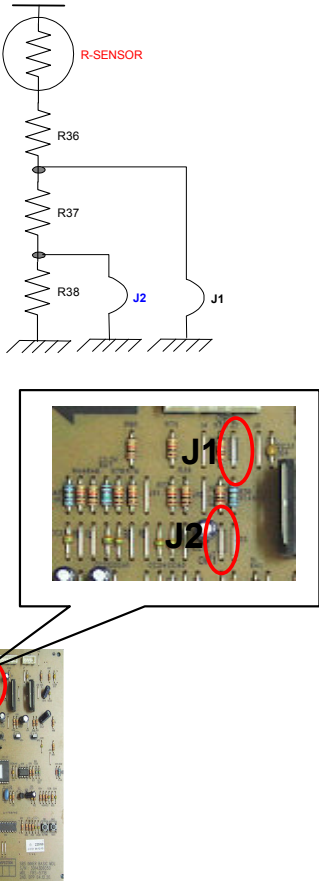

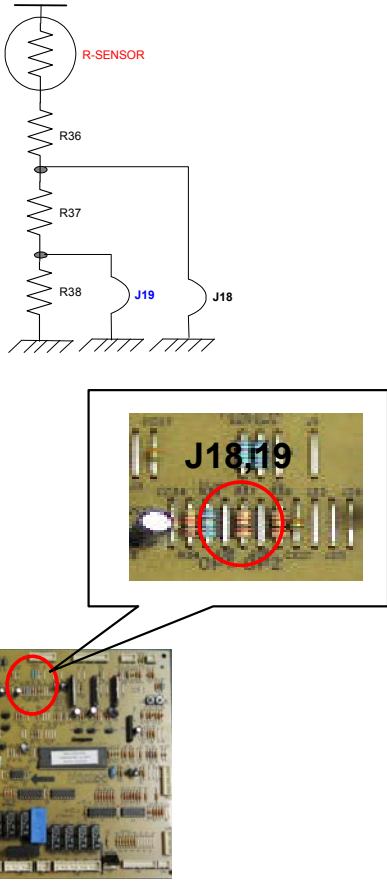

4-8-1. FRS(N)-U20IA

INPUT	CONTROL OBJECT
1. FRZ. TEMP 2. Door Switch	Comp F/R-Fan Heater

CONTENTS	REMARKS

1. Start
  Open and close "Freezer door switch" 5 times while pushing "FRZ. TEMP" button
  simultaneously.
2. Control
  1) All other electrical components are OFF except for F-fan / R-fan
  2) Fan Control
    Door open → Fan ON / Door close → Fan OFF.
  3) Display control
    "FRZ. LED" and "REF. LED" are ON in good order
3. Stop
  1) During Demo mode, push "Freezer door switch" open and close 5 times while pushing
    "FRZ. TEMP" button simultaneously.
  2) Power in again	

4-8-2. FRS(N)-U20DA / EA / FA / GA

INPUT	CONTROL OBJECT
1. "FREEZER SET, WATER/ICE" Button , Door switch	Comp F/R-Fan Heater

CONTENTS	REMARKS

1. Start
  Push "ICE/WATER" button 5 times while pushing "FREEZER SET" button
  simultaneously.
 	
2. Control
  1) All other electrical components are OFF except for F-fan / R-fan
  2) Fan Control
    Door OPEN → Fan ON / Door close → Fan OFF.
 	
3. Stop or termination
  1) During Demo mode, push "ICE/WATER" button 5 times while pushing "FREEZER
    SET" button simultaneously.
  2) Power in again	

4-9. Compensation of R-sensor ON/OFF Point

INPUT	CONTROL OBJECT
Main PCB	Resistance of R-sensor Mid ON/OFF Point

CONTENTS	REMARKS

Compensation of R-sensor ON/OFF temp. (down)

In case temperature of refrigerator compartment is weak or insufficient,
take the following action.

FRS(N)-U20IA	FRS(N)-U20DA/EA/FA/GA

※ Refer to the 5-2.
(Function of each sensor)

R36 : R-SENSOR standard resistance in normal mode (31.4K)
R37 : In case of weak ref., cut J1 (or J18) to down the standard resistance by 1.5deg(2K)
R38 : In case of weak ref., cut J2 (or J19) to down the standard resistance by 1.5deg(2K)

FRS(N) -U20IA	J1	-	cut	cut
	J2	-	-	cut
	Temperature compensation	0℃	-1.5℃	3℃
FRS(N) -U20DA	J18	-	cut	cut
	J19	-	-	cut
	Temperature compensation	0℃	-1.5℃	3℃

4-10. Error Display

4-10-1. FRS(N)-U20IA (LED Display of Inner Control)

INPUT	CONTROL OBJECT
Temperature Control Buttons	Lamp LED of Inner control

CONTENTS	REMARKS
1. How to start 1) Press "FRZ.TEMP" button 5 times while pressing "REF.TEMP" button at the same time. 2. How to stop 1) Push "FRZ.TEMP" button 1 time. 2) It stops automatically in 4 minutes from the start. 3. All the error codes are reset if they turn to be normal. 4. Error display	

CONTENTS	Display
F-sensor : open ("Lo"), short ("Hi")	FRZ. LED "5" is on and off
R-sensor : open ("Lo"), short ("Hi")	FRZ. LED "4" is on and off
RT-sensor : open ("Lo"), short ("Hi")	FRZ. LED "3" is on and off
D-sensor : open ("Lo"), short ("Hi")	FRZ. LED "2" is on and off
R-Door Switch : defective	FRZ. LED "1" is on and off
F-Door Switch : defective	REF. LED "5" is on and off
Cycle : defective	REF. LED "3" is on and off
Return after defrosting : defective	REF. LED "2" is on and off
EEPROM : defective	REF. LED "1" is on and off
Full Down mode	REF. LED "1" is on
Forced defrost mode for A/S	REF. LED "1" is on and off (twice)

(Full down mode and forced defrost mode are displayed while pressing
"REF.TEMP" button at the error display mode)

CONTENTS	REMARKS

5. Control way of Errors (if any)

1) "F-sensor" error
   Cause : F-sensor open or short
   Control : Condition of ambient temperature
   How to reset : If F-sensor is normal, the error is terminal temperature.

RT-S	~ 9℃	~ 15℃	~ 21℃	~ 31℃	~ 41℃	Over 41℃
ON/OFF (min)	14 / 50	16 / 41	27 / 45	26 / 22	35 / 20	35 / 20

2) "R-sensor" error
   Cause : R-sensor open or short
   Control : Condition of ambient temperature
   How to reset : If R-sensor is normal, the error is terminal temperature.

RT-S	~ 9℃	~ 15℃	~ 21℃	~ 31℃	~ 41℃	Over 41℃
ON/OFF (min)	OFF	3 / 50	2 / 10	3 / 7	4 / 6	6 / 4

3) "RT-sensor" error
   Cause : RT-sensor open or short (full down)
   Control : Normal operation, deletion of control by RT-sensor
        If RT-sensor is normal, the error is terminated automatically.

4) "D-sensor" error
   Cause : D-sensor open or short (full down)
   Control : Time limit (30 min) of defrosting return
        If D-sensor is normal, the error is terminated automatically.

5) "Door" error
   Cause : in case it senses that door is open for more than 1 hour.
   Control : Deletion of function related door switch sensing
        If door switch (open & close) is sensed, the error is terminated automatically.

6) "Cycle" error
   Cause : in case comp. works for over 3 hours when D-sensor temp. is over -5℃
   Control : normal operation
        When D-sensor temp. is below -5℃ in comp. off it is terminated.

7) "Return after defrosting" error
   Cause : in case defrosting return is done by time limit of 80 min
   Control : Deletion of Pre-cool mode in defrosting mode
        If defrosting return is done by D-sensor, it is terminated.

8) A/S forced defrosting mode
   Push "REFRIGERATOR SET" button 5 times while pushing "FREEZER SET" button
   Simultaneously.
   Control : A/S forced defrosting control (Pre-cool is deleted)
   If D-sensor temp. is over 10℃, the mode is terminated automatically.
   When all error code is normal, the Refrigerator reset

4-10-2. FRS(N)-U20DA/EA/FA/GA (CLED Display of Front PCB)

INPUT	CONTROL OBJECT
Temperature Control Buttons	88 Display CLED

CONTENTS	REMARKS

1. How to start
 1) Under "LOCK" mode, press "SUPER FREEZER" button 5 times while pressing
   "FREEZER SET" button at the same time.
 2) The front CLED displays as the right diagram shows
   ([Ex.] Time Display of 0003 signifies 3 minutes of power on time.)
 3) Press "FREEZER SET" button and the following value is displayed successively.
  ① Time
  ② F-Sensor temperature
  ③ D-Sensor temperature
  ④ R-Sensor temperature
  ⑤ RT-Sensor temperature
  ⑥ P Factor display (Refer to water supply mode of automatic icemaker)
  ⑦ Filter remaining time until change (First check ; 4,320Hr)
    Refer to Filter Information Reset of CLED of front control panel.
 4) Error is displayed only if there is any ; it is skipped if no error.

2. How to stop
 1) Push "LOCK" button 1 time.
 2) It stops automatically in 4 minutes from the start.

3. All the error Codes are reset if they turn to be normal.

4. Error code

ERROR CODE	CONTENTS
F1	F-sensor : disconnection ("Lo"), short ("Hi")
r1	R-sensor : disconnection ("Lo"), short ("Hi")
rt	RT-sensor : disconnection ("Lo"), short ("Hi")
d1	D-sensor : disconnection ("Lo"), short ("Hi")
dr	R-Door Switch : defective
dF	F-Door Switch : defective
dH	Home bar Door Switch : defective
EI	I-sensor : disconnection ("Lo"), short ("Hi")
EF	Flow sensor : defective
Et	Horizontal switch : error
Eg	Water supply : error
ES	Micro switch : error
EA	Drop the ice while Et
Eu	Full ice switch : error
C1	Cycle : abnormal or defective
F3	Return after defrosting : abnormal or defective
Co	Display Full Down mode
D2	Display forced defrost mode for A/S

CONTENTS	REMARKS

5. Control way of Error (if any)

1) "F1" error

Cause : F-sensor disconnection or short

Check point : Measure the resistance between both terminals after separating CN8 (or CN15)
of the Main PCB. (Refer to the 5-2.)

If F-sensor is disconnected or shorted , change the F-sensor in the freezer compartment.

How to reset : If F-sensor is normal, the error is terminal temperature.

2) "R1" error

Cause : R-sensor disconnection or short

Check point : Measure the resistance between both terminals after separating CN7 (or CN14)
of the Main PCB. (Refer to the 5-2.)

If R-sensor is disconnected or shorted , change the F-sensor in the refrigerator compartment.

How to reset : If R-sensor is normal, the error is terminal temperature.

3) "rt" error

Cause : RT-sensor disconnection or short (full down)

Check point : Measure the voltage of "A" part on the Main PCB.

If the voltage is 0.5V~4.5V, it is normal.

If the voltage is 0V (short) or 5V (disconnected), change the RT-sensor on the Main PCB

How to reset : If RT-sensor is normal, the error is terminated automatically.

< FRS(N)-U20IA >   < FRS(N)-U20DA >

4) "d1" error

Cause : D-sensor disconnection or short (full down)

Check point : Measure the resistance between both terminals after separating CN8 (or CN15)
of the Main PCB. (Refer to the 5-2.)

If D-sensor is disconnected or shorted , change the D-sensor on the evaporator.

How to reset : If D-sensor is normal, the error is terminated automatically.

5) Door error ("dF" "dR" "dH" on display)

Cause : in case it senses that door is open for more than 1 hour.

Check point : F/R door is opened or not.

6) "C1" error

Cause : in case comp. works for over 3 hours when D-sensor temp. is over -5℃

Check point : Refrigerant leakage.

7) "F3" error

Cause : in case defrosting return is done by time limit of 80 min

Check point : Measure the resistance between both terminals of the defrost heater.
(Assembled with evaporator)

If the resistance is ∞Ω (disconnected) or 0Ω (short) change the

8) "d2" mode (A/S forced defrosting mode)

Push "REFRIGERATOR SET" button 5 times while pushing "FREEZER SET" button
simultaneously.

Control : A/S forced defrosting control (Pre-cool is deleted)

If D-sensor temp. is over 10℃, the mode is terminated automatically.

Refer to the 4-3. .

CONTENTS	REMARKS

9) "EI"ERROR

   Cause : I-SENSOR disconnection / short

Check point : Measure the resistance between both terminals after separating CN11
           of the Main PCB. (Refer to the 5-2.)

   If F-sensor is disconnected or shorted , change the I-sensor in the automatic ice maker.

10) "EF" ERROR

   Cause : When Flow-sensor ERROR (There is no Pulse during some time)

        The number of pulse signal is below 10 by 1 sec during water supply.

   Check point : Water supply line

11) "Eg" ERROR

   Cause : I-sensor temp (5min after water supply) doesn't go up.

   Check the I-sensor or water supply line.

12) "ES" error (MICRO switch error)

   Cause : When it senses 1min continuously

   Check the MICRO switch of the dispenser.

13) "Ea" error

   Cause : Malfunction of ice drop motor.

   Check the motor by pushing test switch.

14) "Eu" error

   Cause : Switch (which senses if the ice is full or not) is in error.

   Control : When dropping the ice, the motor just rotates 90 degree.

   Termination : When the switch is in normal.

15)"EA" ERROR

   Cause : When sensing Ice dropping by time 3 times in level sensor SW Error.

   Control : Stop of Ice Maker

   Termination : With normal level switch.

   Re-input of power or push if icemaker test switch.

16)"Et" ERROR

   Cause : Level switch error (No pulse is sensed for some time)

   Control : By time (Supply mode is skipped)

   Termination : Normal condition.

 * When all ERROR CODE is normal, the Refrigerator reset

4-11. Summary of Function

4-11-1. FRS(N)-U20IA (Inner Control)

INPUT	CONTROL OBJECT
Each button	Resistance of R-sensor Mid ON/OFF Point

CONTENTS	REMARKS
Element A/S Function	

Forced Defrosting	"FRZ.TEMP" + "REF.TEMP" 5 times
Pull Down	"REF.TEMP"+ "FRZ.DOOR" OPEN/CLOSE 5 times
Demo function	"FRZ.TEMP"+ "FRZ.DOOR" OPEN/CLOSE 5 times
Error display	"REF.TEMP"+ "FRZ.TEMP" 5 times

4-11-2. FRS(N)-U20DA/EA/FA/GA (Front PCB)

INPUT	CONTROL OBJECT
Each button	Resistance of R-sensor Mid ON/OFF Point

CONTENTS	REMARKS
1. All the modes are started "LOCK" mode (except "FILTER RESET" mode) 2. Element A/S Function	

Forced Defrosting	"FREEZER SET" + "REFRIGERATOR SET" 5 times
Reset water filter	Push "RESET WATER FILTER" for 3 seconds
Demo function	"REFRIGERATOR SET" + "WATER/ICE" 5 times
Pull Down	"REFRIGERATOR SET"+ "FREEZER SET"+ "WATER/ICE"5 times
Error display	"FREEZER SET"+ "SUPER FREEZER" 5 times
EEPROM clear	"WATER/ICE"+ "RESET WATER FILTER" 5times
Ice maker test	"WATER/ICE" + "ICE MAKER LOCK" 5 times

4-12. Back up Function (FRS(N)-U20DA/EA/FA/GA)

INPUT	CONTROL OBJECT
None	1. F-FAN, R-FAN, C-FAN

CONTENTS	REMARKS
1. Filter Exchange Information : Record as a real-time from the point of power input 2. P Factor (Information about Ice Maker)	

4-13. Automatic Icemaker (FRS(N)-U20DA/EA/FA/GA)

INPUT	CONTROL OBJECT
Full ice sensing switch Ice Maker Lock Sensors	Ice separating motor

CONTENTS	REMARKS

1. Flow of ice making
 	
START
 	
Ice making mode ▶ Ice is being made
(water supply stand by)
Ice separating mode ▶ Ice tray is twisted to separate ice cubes
Water supply mode ▶ Water is supplied to ice tray
Water supply check mode ▶ Check is water is supplied OK.
RETURN
 	
1) Press TEST switch under the Icemaker for more than 1 second and test starts.
   * Test mode starts from ice separating mode.
   * In case test switch has an error of short, test is done only once.	

CONTENTS	REMARKS

2) With the initial power input, Ice tray turns to be horizontal and ice making
mode starts.

3) Control of water hose heater
 * Heater is always ON if RT-sensor has an error or RT is below 15 degree.
 * Heater is always ON for 60 minutes (max. Limit time) if Flow-sensor has
 an error

4) Water supply stand-by
 Condition : if ice is sensed full
 Operation : proceeds to Ice making mode (Ice separating and water supply Modes stop)

5) Crusher Function
 It stops operation when freezer door is open
 It operates if freezer door is closed.

2 Ice making mode
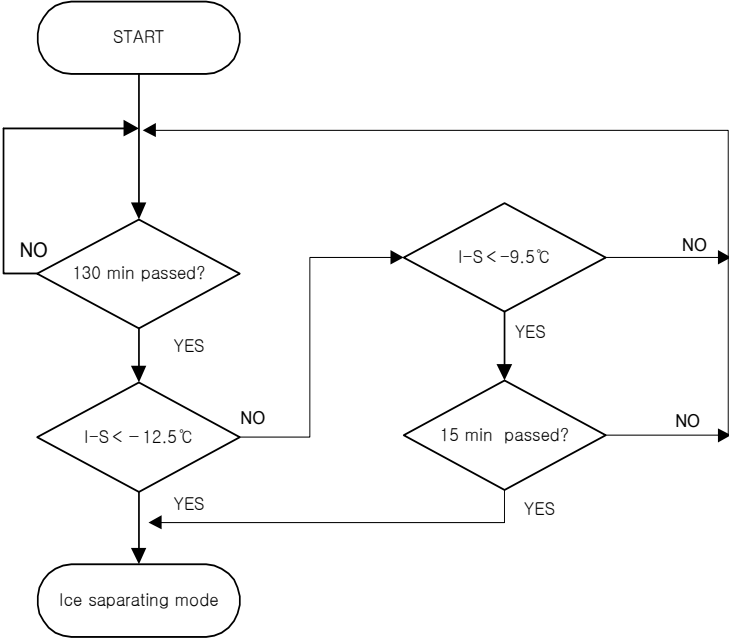

1) Ice making stops if ice-sensor is below -12.5℃ after 130 minutes.

2) Ice making also stops if ice-sensor is below -9.5℃ for 15 minutes, though
 ice-sensor is not below -12.5℃ after 130 minutes.

3) In case of ice sensor, ice making stops after 4.8 hours.

CONTENTS	REMARKS

3. Ice separating (drop) mode

status of ice tray	Ice separation start		Horizontal position
level SW			
normal level SW	8~11sec	MAX1.1sec	8.5~12.2sec	0.2sec
motor revolution	CW	CCW	CW	STOP
level SW error	10 sec	11 sec	1.1 sec
1) Time of each zone used to verify level switch error
2) The rotation of motor is sensed at each zone
3) In case of level switch error, ice separation is done by time.
4) If ice separating motor has error, the mode stop.

4. Water supply mode

START

Water supply valve ON

Water flow Pulse Count = 0

1sec passed after water valve ON ? — N

Y

Water flow Pulse > 10 — N → Flow-Sensor Error mode operation

Y

Water flow Pulse spec > Pulse spec — Y

N

water supply time > time spec — N

Y

water supply valve OFF

END
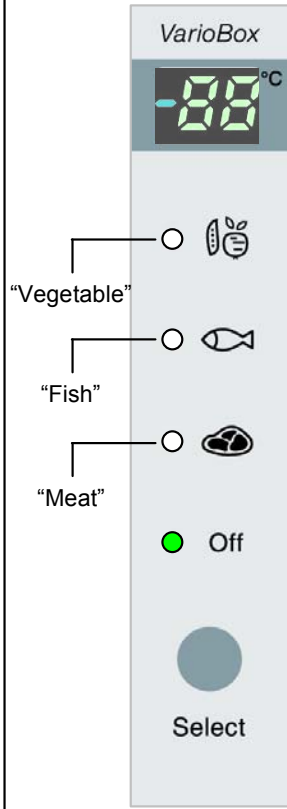

CONTENTS	REMARKS

1) Water supply valve is open when water supply mode starts after separation of ices.
 	
2) Water is supplied by time in case sensor has error.
 	
3) Factor valve is variable which can be useful in AS action
① Water flow pulse is set to 238 if flow sensor is in normal condition.
  (If water is supplied by time, maximum water supply time 165 seconds)
② In case water flow sensor has error, water time is 5.5 seconds.
 	
5. Water supply check mode
  5 minutes after water supply the status can be checked by RT-sensor and increase
  of temp. Ice sensor.	

RT-S	9℃↓	~15℃	~21℃	~31℃	~41℃	41℃↑
I-S	-10℃	-9℃	-8℃	-7℃	-6℃	-5℃

4-14. Dispenser Control Function

INPUT	CONTROL OBJECT
Dispenser switch WATER/ICE Button ICE MAKER LOCK Button Freezer Door Switch	Dispenser Lamp Crusher Motor Flap Solenoid Crusher Solenoid Dispenser Water Valve

CONTENTS	REMARKS

1) Initial mode : water
  (Mode change : Water → Cubed ice → Crushed ice)
  - Selected icon LED turns ON and others are OFF.
 	
2) ICE MAKER LOCK Button
  Icemaker Lock function and its ICON Turn ON/OFF by pressing the button.
 	
3) Display
① Water ICON turns ON as default mode
② The ICON of each mode turns ON by pressing its button.
  (If display switch makes error during operation of a mode, its ICON turns OFF)
③ When Icemaker Lock ICON turns ON.
  - ICE MAKER LOCK ICON turns ON
  - If it is in the mode of Cubed Ice or Crushed Ice, the mode is changed to
    Water and Water ICON turns ON
  - If there is no button input for 1 hour after selecting Cubed Ice or Crushed
    Ice the mode turns to Water (default)	

4-15. Temperature control of "Magic Cool Zone" compartment (FRS(N)-U20EA/GA)

INPUT	CONTROL OBJECT
1. R-Fan 2. "Magic Cool Zone" sensor 3. "SELECT" button	1. "Magic Cool Zone" damper 2. Damper heater

CONTENTS	REMARKS

CONTENTS

1. "Select" button
   1) Temperature control of "Magic Cool Zone" compartment
   2) 4 step mode of successive temperature mode.
      Initial mode by power input : "OFF"
      ("Off" → "Vegetable" → "Fish"→ "Meat"→ "Off")
      Letters are indicated on "88" display LED

Mode		Display	Damper Open/Close point	
			Open	Close
			Temp (℃)	Temp (℃)
Power input	Off	-	-	-
1'st Press	Vegetable	3	9	8
2'nd Press	Fish	-1	3	2
3'rd Press	Meat	-3	1	0

2. Normal Stepping motor Control (It is linked with Refrigerator Fan (R-Fan))

R-Fan	"Magic Cool Zone" damper	Remark
ON	Always close	
OFF	Each mode ON/OFF Control	

3. Damper heater control
   1) Damper open → Damper heater OFF
   2) Damper close → Damper heater ON

4. How to check error mode (Temp. display and forced damper Open/Close)
   1) How to start
      Push "Select" button for 2 seconds.
      ① Initial display : "sensor temp." display. (if sensor is normal)
                          "Er" display. (if sensor is disconnected or short)
      ② Press "Select" button 1 time : "OP" display. (forced damper open)
      ③ Press "Select" button 2 time : "CL" display. (forced damper close)
   2) How to stop
      It stops automatically in 20 sec. from the start.

5. Control way for "Magic Cool Zone" sensor error.
   1) If "Magic Cool Zone" sensor is disconnected or short.
   2) Damper open and close by below table. Control (Condition of "Select" button)

Condition		"Select"			
		"Off"	"Vegetable"	"Fish"	"Meat"
R-Fan	ON	Close	Close	Close	Close
	OFF	Close	Close	After 2min open from R-Fan off, and then close	Open

4) Control Flow & Timing Chart
  ① Crushed Ice
  ② Cubed Ice
  ③ Water
Delay time : A = 500ms, B = 500ms, C = 2.0s, D = 5.0s

5-1. Power Circuit Diagram

■ FRS(N)-U20IA
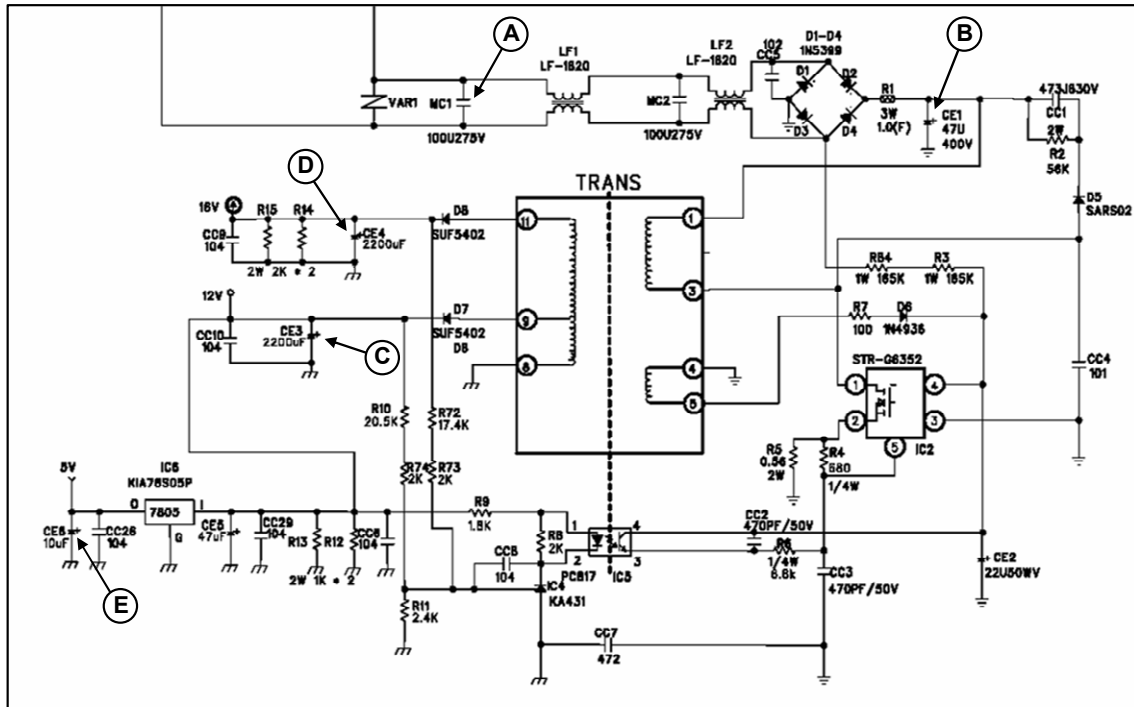

■ FRS(N)-U20DA/EA/FA/GA
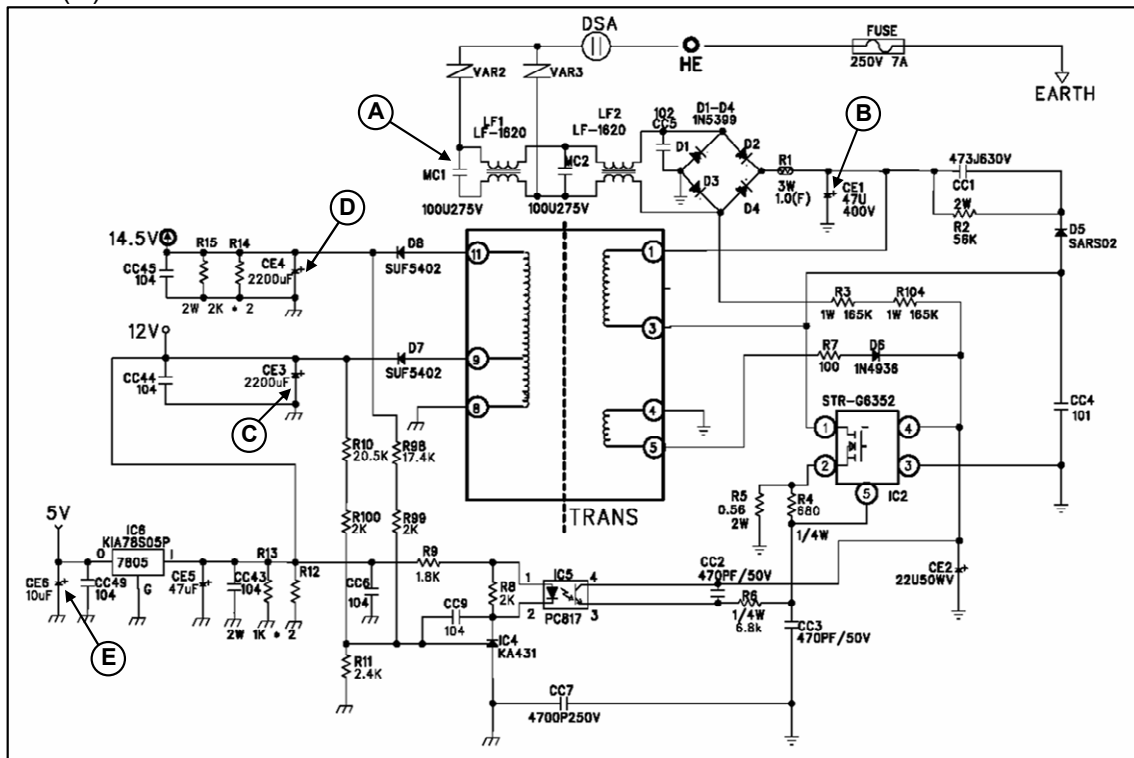

※ Voltage of every part

Parts	A	B	C	D	E
	MC1	CE1	CE3	CE4	CE6
Voltage	230Vdc	310Vac	12Vdc	14.5Vdc	5Vdc

※ **Caution :** Since high voltage (DC310V) is maintained at the power terminal, please take a measure after more than 3minutes have passed after removing power cords in the abnormal operation of a circuit.

5-2. Function of Each Sensor

■ FRS(N)-U20IA

CONTENTS	REMARKS
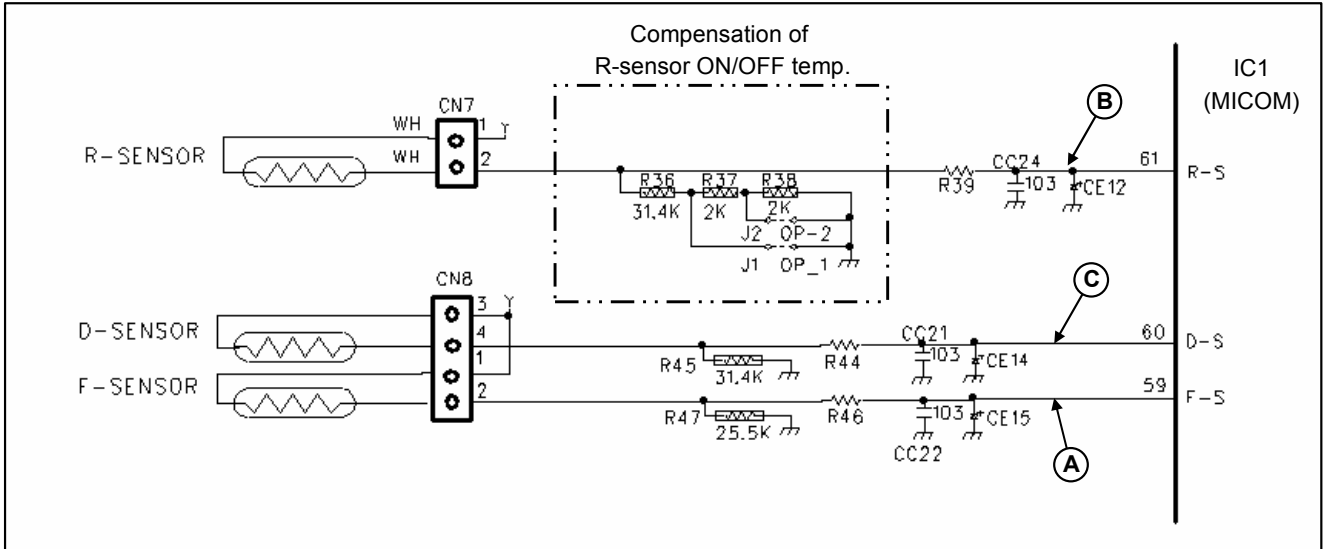

[F-sensor]

1) It senses the temperature of freezer compartment and control Comp., F-fan ON/OFF

2) How it works;

Working Point	Low ON	Mid OFF	High OFF
Working Temp.	-11℃	-16℃	-19℃
Resistance	≒9.32kΩ	≒15.19kΩ	≒15.58kΩ
Sensing Voltage	≒3.24V	≒2.93V	≒2.73V

[R-sensor]

1) It senses the temperature of refrigerator compartment and control R-fan ON/OFF

2) How it works;

Working Point	Low ON	Mid OFF	High OFF
Working Temp.	7.7℃	5.2℃	3.2℃
Resistance	≒23.33kΩ	≒24.05kΩ	≒24.76kΩ
Sensing Voltage	≒2.96V	≒2.83V	≒2.72V

[D-sensor]

1) It senses return point of defrosting heater.

2) How it works;

Working Point	Return point of defrosting heater
Working Temp.	13℃
Resistance	≒22.56kΩ
Sensing Voltage	≒3.08V

* In case temperature of refrigerator compartment is weak or insufficient though comp.
and R-fan operate in normal way;
1) Cut J1 on the M-PCB, then temp. is lowered 1.5℃ than [Mid OFF point]
2) Cut J1 and J2 on the M-PCB, then the temp, is lowered 3℃.

■ FRS(N)-U20DA/EA/FA/GA

CONTENTS	REMARKS
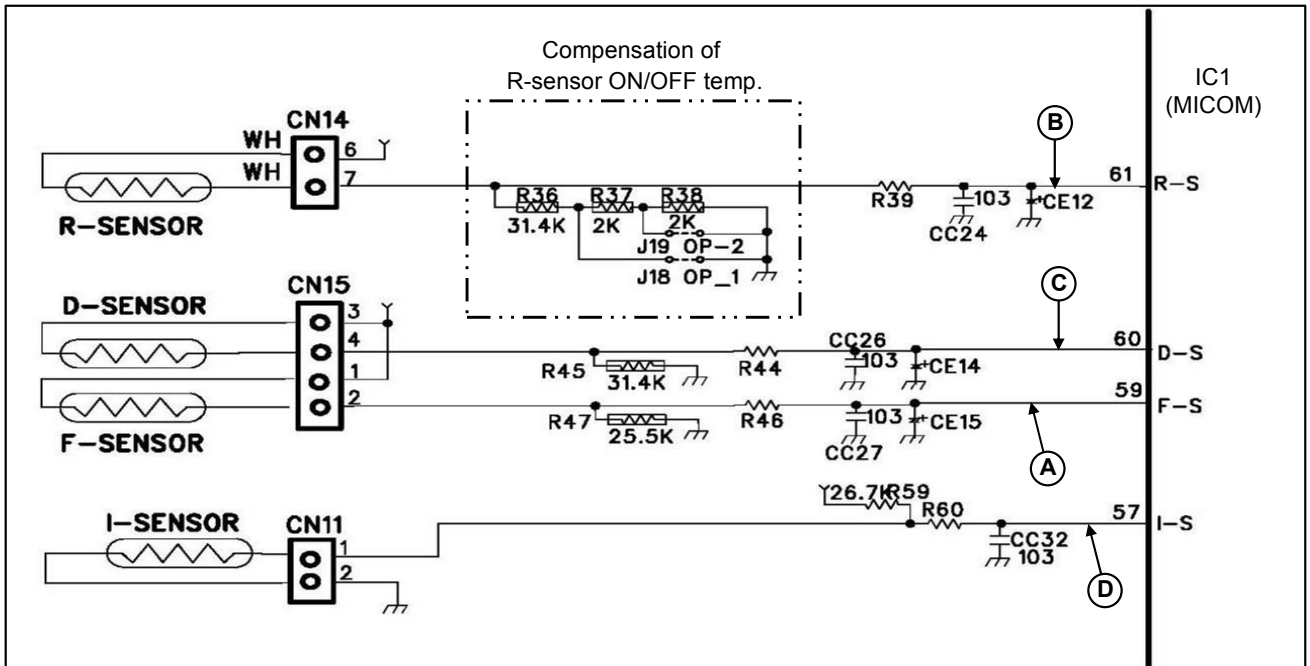

[F-sensor (A)]

1) It senses the temperature of freezer compartment and control Comp., F-fan ON/OFF

2) How it works;

Note: For Comp through Water (Ice) rows, IC7 applies to the ULN2004 columns. For Water (Dispenser) through Water Pipe Heater rows, IC8 applies to the ULN2004 columns.

5-4. Fan Function

1. Circuit Diagram

■ FRS(N)-U20IA
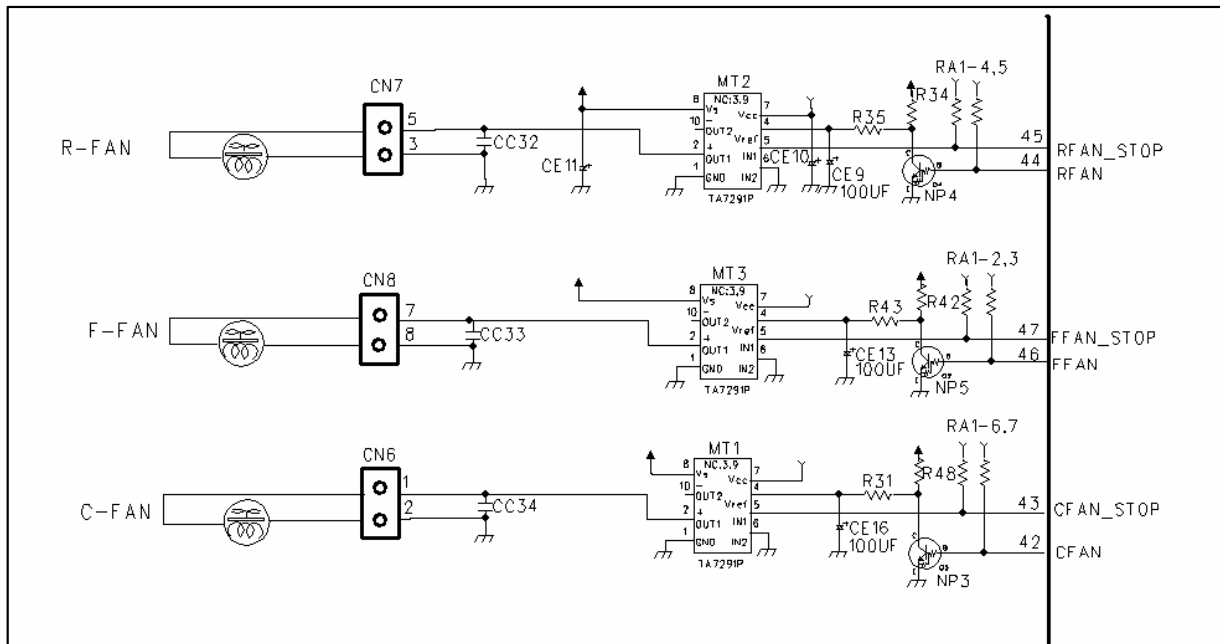

■ FRS(N)-U20DA/EA/FA/GA
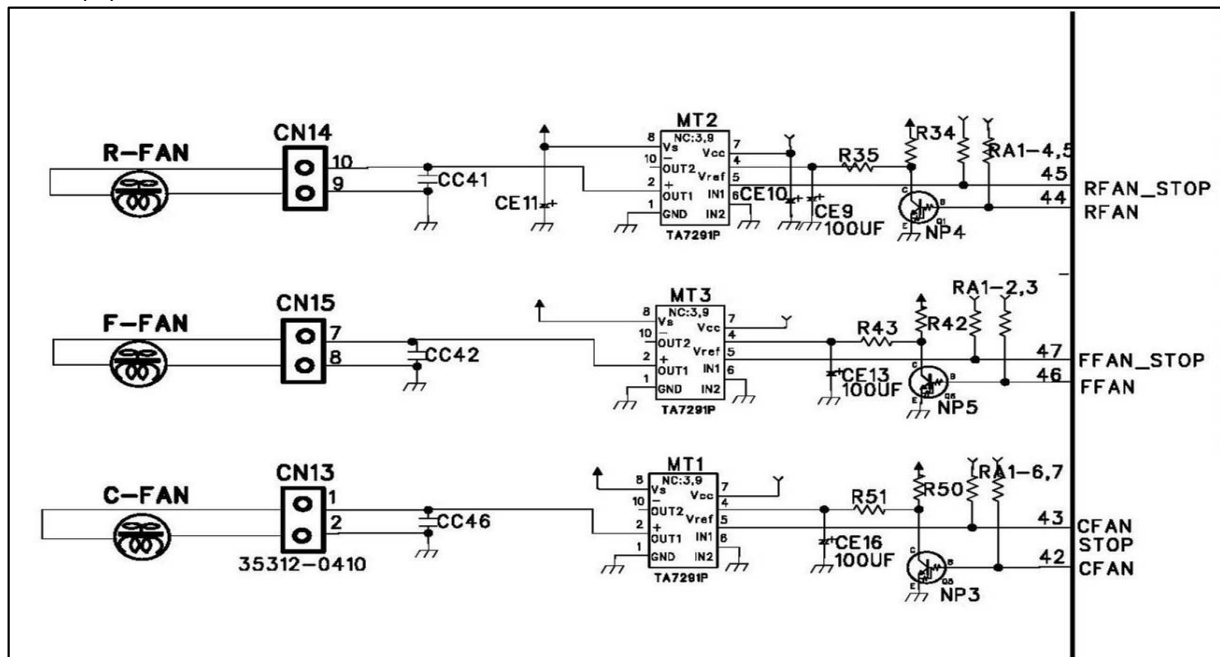

2. Explanation for the operation

* TA7291P is the drive IC for the only DC motor, and used for control of the fan motor
* One input and output is used for the control of the fan motor

Input	Output	
Motor IC No.5 Pin (R:MT2/F:MT3/C:MT1)	Motor IC No.2 Pin (R:MT2/F:MT3/C:MT1)	Remark
High	High	13V
Low	Low	Stop

- Vref is the reference voltage for the adjustment of the output voltage by the voltage
distribution of Vs (Maximum output voltage), and the output voltage applied to the fan
is determined by the PWM control using the software.

8. HOW TO CHECK EACH PARTS

8-1. Hose Ice Maker Tube Assembly

1) Disassembling Procedure
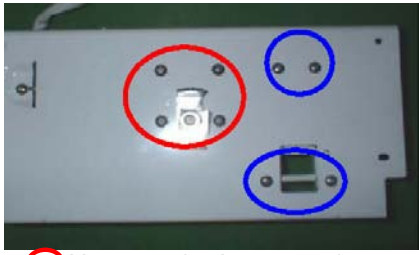

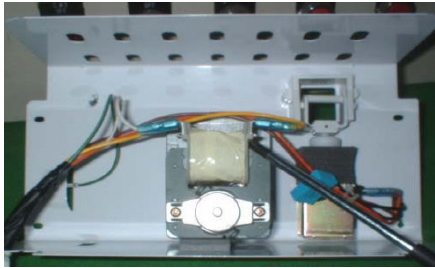

NO	DISASSEMBLING PROCEDURE	NO	DISASSEMBLING PROCEDURE
1	▷ Pull forward Ice Storage Case	5	▷ Remove 2 screws at the Cove Guide Cab W/Tube A.
2	▷ Remove 2 screws.	6	▷ Disassemble Cover Guide Cab W/Tube A
3	▷ Pull forward Ice Maker.	7	▷ Pull forward Hose Ice Maker Tube As.
4	▷ Remove Water Hose Heater's 2P housing.	8	▷ Check Hose Ice Maker Tube As.

2) How to check Hose Ice Maker Tube As.
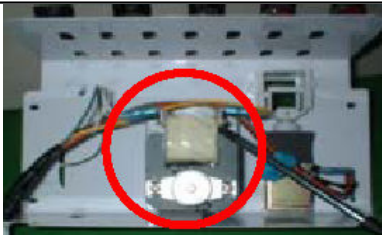

How to check		CRITERION
	▷ Measure the resistance of two wire	▷ Good: 9680Ω(±8%) (8900 ~ 10456Ω) ▷ If defective, change

8-2. Bracket Geared Motor Assembly

1) Disassembling Procedure

NO	DISASSEMBLING PROCEDURE	NO	DISASSEMBLING PROCEDURE
1	 ▷Remove 2 screws.	4	 ▷Pull forward Bracket Geared Motor.
2	 ▷Unscrew (4 points).	5	 ◯ Unscrew (red 4 screws). ◯ Unscrew (blue 4 screws).
3	 ▷Separate 6 pin housing of Bracket Geared Motor from the top connector.	6	 ▷Check Solenoid Valve and Geared Motor.

2) How to Check Hose Ice Maker Tube Assembly

PARTS	SPEC.	HOW TO CHECK	CRITERION
Geared Motor	▷SPEC. NAME :DAG-6502DEC ▷VOLTAGE :220/240V,50Hz	 ▷Check resistance value of 2 terminals with a Multi Tester.	▷GOOD : 11.3Ω($\pm$10%) (10.8 ~ 12.7Ω) ▷DEFECTIVE ; Change the Geared Motor.
Cube Sol Valve	▷SPEC. NAME :Cube SN8 ▷VOLTAGE :220/240V,50Hz	 ▷Check resistance value of 2 terminals with a Multi Tester.	▷GOOD : 145Ω($\pm$8%) (133 ~ 156Ω) ▷DEFECTIVE ; Change the Cube Sol Valve.

8-3. Dispenser Micro Switch

1) Disassembling Procedure
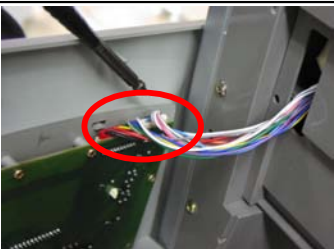

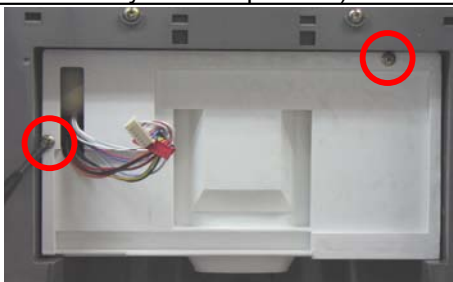

NO	DISASSEMBLING PROCEDURE	NO	DISASSEMBLING PROCEDURE
1	▷ Insert (-) screw driver into bottom hole of Dispenser Button Guide. Pull up forward to remove the guide. (Be careful not to damage guide surface.)	3	▷ Separate wire connectors from Micro Switch.
2	▷ Remove Micro switch.	4	▷ Check Micro Switch.

2) How to Check Micro Switch

PARTS	HOW TO CHECK	CRITERION		
SPEC. NAME : VP333A-OD-8 VOLTAGE :125V,3A	▷ Check both terminals (red circle) with a Multi Tester (Tester Mode : Resistance (Ω).	▷ GOOD :		
		Tact Switch (Blue Circle)	Terminals (Red circle)	Tester Result (Resistance Mode)
		ON (Close)	Connected	Some Value
		OFF (Open)	Disconnected	No value (0)
		▷ DEFECTIVE : Change Micro Switch.		

8-4. Dispenser Solenoid Valve

1) Disassembling Procedure

NO	DISASSEMBLING PROCEDURE	NO	DISASSEMBLING PROCEDURE
1	▷ Insert (-) screw driver into bottom left groove of Cover Dispenser Box. Pull forward with a snap.(Be careful not to damage cover and door surface.)	4	▷ Separate 2 terminals from Sol Valve and 2P Housings from Cover Ice Flap.
2	▷ Separate 2 housings of 10P / 7P from Front PCB. (Do not hold only wires to pull out.)	5	▷ Unscrew (3 points) to remove Sol Valve.
3	▷ Unscrew (2 points) to remove Box Dispenser Shut.	6	▷ Unscrew (1 point) to remove Cover Ice Flap.
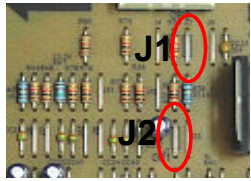

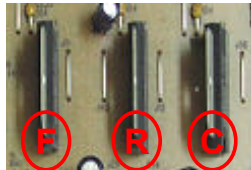

2) How to Check Micro Switch

PARTS	SPEC.	HOW TO CHECK	CRITERION
Dispenser Sol Valve	▷ SPEC. NAME :SOL2003-01B ▷ VOLTAGE :220/240V,50Hz	▷ Check resistance value of both terminals with a tester.	▷ Good : 215Ω(±10%) (193 ~ 236Ω) ▷ DEFECTIVE : 0 Change Sol Valve.
Flap Heater Assembly	▷ VOLTAGE :DC 12V,1.5W	▷ Check resistance value of both terminals with a tester.	▷ GOOD : 96Ω(±8%) (88 ~ 104Ω) ▷ DEFECTIVE ; Change Flap Heater AS.

8-5. Main PCB
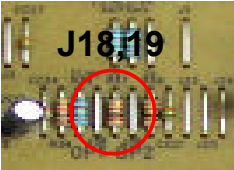

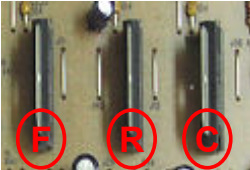

■ FRS(N)-U20IA

NO	ITEM	CHECK POINT	REMARK
1	Compensation of Weak Refrigeration →Making R-temp cooler	* Used when making R-temp. down to compensate for weak refrigeration without changing FCP temp. setting. ▷Cutting of J1 ; down by 1.5℃ ▷Cutting of J1, J2 ; down by 3℃	
2	Relay Power Controller	* To check normal voltage of each electrical devices to & from Mi-com. ▷Check input & output voltage of MICOM and IC7	
3	Fan Power Controller	* To check input & output voltage of Fan ▷#2 : Input ▷#5 : Output	
4	Electric Current Fuse	* To check when each device does not work (250V,3.15A)	
5	Time Shortening Switch	* To shorten time in PCB checkup (Pressing 1 time is regarded as 1 minute has passed.)	
6	Regulator IC(5V)	* To check voltage of MICOM and IC Voltage check of IC#6 (Input :12V,Output : 5V)	
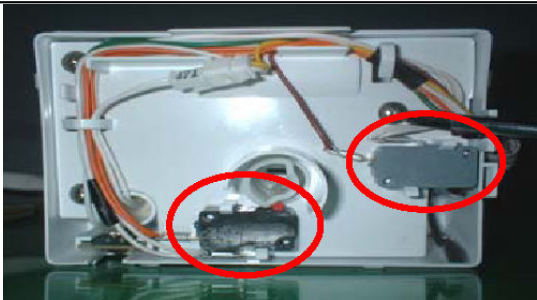

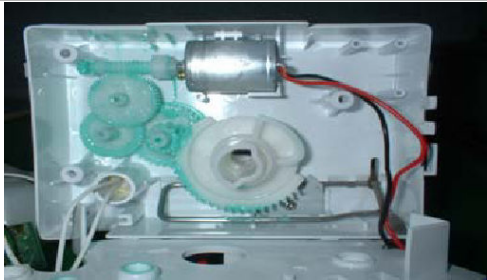

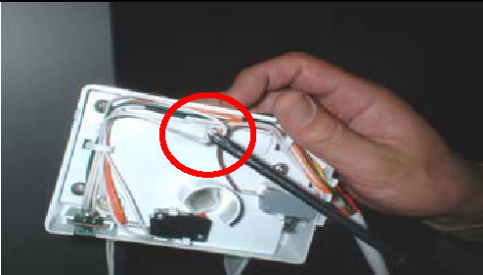

■ FRS(N)-U20DA/EA/FA/GA

NO	ITEM	CHECK POINT	REMARK
1	Compensation of Weak Refrigeration →Making R-temp cooler	**J18,19** (image) * Used when making R-temp. down to compensate for weak refrigeration without changing FCP temp. setting. ▷Cutting of J18 ; down by 1.5 ℃ ▷Cutting of J18, J19 ; down by 3℃	
2	Relay Power Controller	* To check normal voltage of each electrical devices to & from Mi-com. ▷Check input & output voltage of MICOM and IC7, 8.	
3	Fan Power Controller	(image: F R C) * To check input & output voltage of Fan (image: TOSHIBA JAPAN TA7291P 0343K) ▷#2 : Input ▷#5 : Output	
4	Electric Current Fuse	* To check when each device does not work (250V,3.15A)	
5	Time Shortening Switch	* To shorten time in PCB checkup (Pressing 1 time is regarded as 1 minute has passed.)	
6	Regurator IC(5V)	* To check voltage of MICOM and IC Voltage check of IC#6 (Input :12V,Output : 5V)	
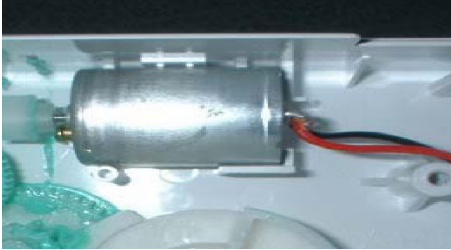

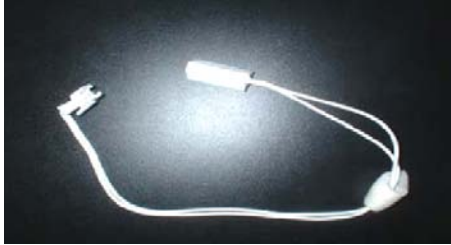

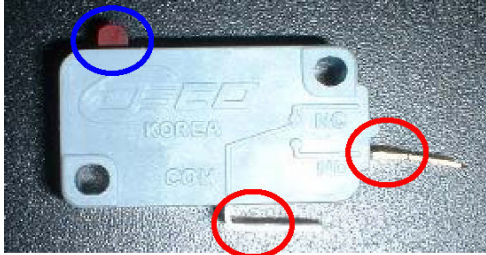

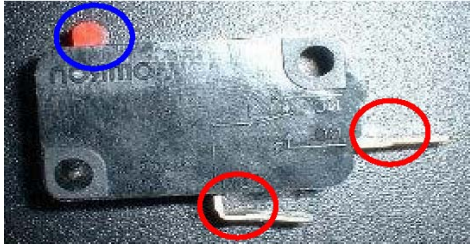

8-6. Ice Maker

1) Disassembling Procedure

NO	DISASSEMBLING PROCEDURE	NO	DISASSEMBLING PROCEDURE
1	▷ Remove 2 screws on top front of ice maker.	6	▷ Remove full ice sensing switch and level switch.
2	▷ Pull forward ice maker.	7	▷ Unscrew (3 points) Plate Gear Fixture.
3	▷ Unscrew Fixture of Frame Ice Maker.	8	▷ Check if ice dropping motor is normal (OK).
4	▷ Separate Ice Maker Assembly from Frame Ice Maker.	9	▷ Remove 2 pin housing from Plate Gear Fixture.
5	▷ Separate Cover I/M (A) from Cover I/M (B) with a (-) screw driver.	10	▷ Remove I-sensor (ice sensor) from Case Icing As.

* Follow the reverse order when assembling.

2) How to Check Ice Maker

PARTS	HOW TO CHECK	CRITERION		
Ice Dropping Motor	▷ Check resistance value of 2 wires with a Multi Tester.	▷ GOOD : RS-360RH-14250 : 6 ~ 14Ω ▷ DEFECTIVE : Change the motor.		
I-Sensor (Ice Sensor)	▷ Check resistance value of 2 wires with a Multi Tester.	▷ GOOD : 4.4 ~ 50kΩ (It depends on surround temp.) ▷ DEFECTIVE : Change the sensor.		
Full Ice Sensing Switch	▷ Check resistance value of 2 terminals with a Multi Tester.	▷ GOOD :		
		Tact Switch (Blue Circle)	Terminals (Red circle)	Tester Result (Resistance Mode)
		ON (Close)	Connected	Some Value
		OFF (Open)	Disconnected	No value (0)
		▷ DEFECTIVE : Change the switch.		
Level Switch	▷ Check resistance value of 2 terminals with a Multi Tester.	▷ GOOD :		
		Tact Switch (Blue Circle)	Terminals (Red circle)	Tester Result (Resistance Mode)
		ON (Close)	Connected	Some Value
		OFF (Open)	Disconnected	No value (0)
		▷ DEFECTIVE : Change the switch.		

9. TROUBLE DIAGNOSIS

9-1. Faulty Start (F/R lights OFF , F-PCB Power OFF)

Start

Power cord or Fuse is disconnected ? — Y → Change the Main Fuse (AC250V 15A) (In the left side of machine compartment)

N ↓

1'st power of SMPS is on? — N → Check power Cord connection from machine compartment and to CN1 of M-PCB.

Y ↓

Main PCB Fuse is disconnected? — Y → Change the Fuse (AC250V 3.15A) (on the Main PCB)

N ↓

Voltage (DC12V/14.5V/5V) on Main PCB is OK? — N → Change Main PCB

※ Refer to the 5-1. (Power circuit diagram)

Y ↓

Wire connection of F-PCB is OK? — Y → Change F-PCB AS.

N ↓

Checkup and connect F-PCB wires.

※ How to replace Front PCB

1) Insert a flat tip driver into the left down groove of panel frame and snap it out smoothly.
2) Separate 2 housings of 10P / 7P from Front PCB. (Do not hold only wires to pull out.)
3) Unscrew (7 points) to remove Front PCB.
   * Follow the reverse order when assembling.

9-2. Freezer Compartment

9-2-1. Freezing failure . (Foods are not frozen / cold.)

Removing and replacing Freezer parts

(1)

1) Remove foods.
2) Remove Ice Bucket, shelves and cases in Freezer compartment.

(2)

* Remove 2 screws of Ice Maker.

(3)

* Remove the Housing of Ice Maker AS. (Right side)

(4)

* Remove 4 screws of Geared Motor.

(5)

* Remove the Housing of Geared Motor AS. (Center)

(6)
* Remove light cover screws.

▼

(7)

* Pull down smoothly the bottom of light cover to remove.

▼

(8)

* Remove the screw of bracket F-Lamp.

▼

(9)

* Remove the left housing.

▼

(10)
* Pull out smoothly the bracket F-Lamp AS. to remove.

▼

(11)

* Hold the end of F-Fan cover and pull forward slowly.

(12)

* Remove the screw cap on the F-Louver A with a flat tip driver.

▼

(13)

* Remove 3 screws of F-Louver A.

▼

(14)

* Hold the end of F-Louver A and pull forward slowly.

▼

(15)
* Remove the housing.

▼

(16)

* Remove the screw of F-Return cover and pull out cover.

▼

(17

* Hold the end of F-Louver B and pull forward slowly.

             │ Change the compressor.│
             └──────────────────────┘
```

Remarks
● Compressor sound is somewhat normal because it works like a heart to circulate the refrigerant in the pipes during the refrigerator operation.   ● Rattling or metallic touch sound of motor, piston of comp. can be heard when it starts or stops.

┌─────────────┐
│ Remarks   │
└─────────────┴──┐
● Water flowing sound, hiss or sizzling sound can make while refrigerant in the pipes is changing from
   liquid to gas state when comp. starts or stops.
   It is normal to the refrigerator.
└──┘

Troubleshooting of Evaporator Sound

1. Hiss Sound from Capillary Tube
1) "I" tube is used to connect the capillary tube and evaporator. (2 welding points : ①, ②)

2) When such a sound is made, attach a absorber on the tube including 2 welding points.

2. Sizzling Sound from Accumulator

Attach a absorber on point ③ (accumulator).

3. Shaking or trembling Sound of Evaporator
1) Check whether evaporator is fastened tight with the fasteners of ①, ②.

2) Insert a soft spacer (EPS) between left and right wall. Evaporator not to be shaken or trembled during refrigerator operation.

                  └───────────────────┘
```
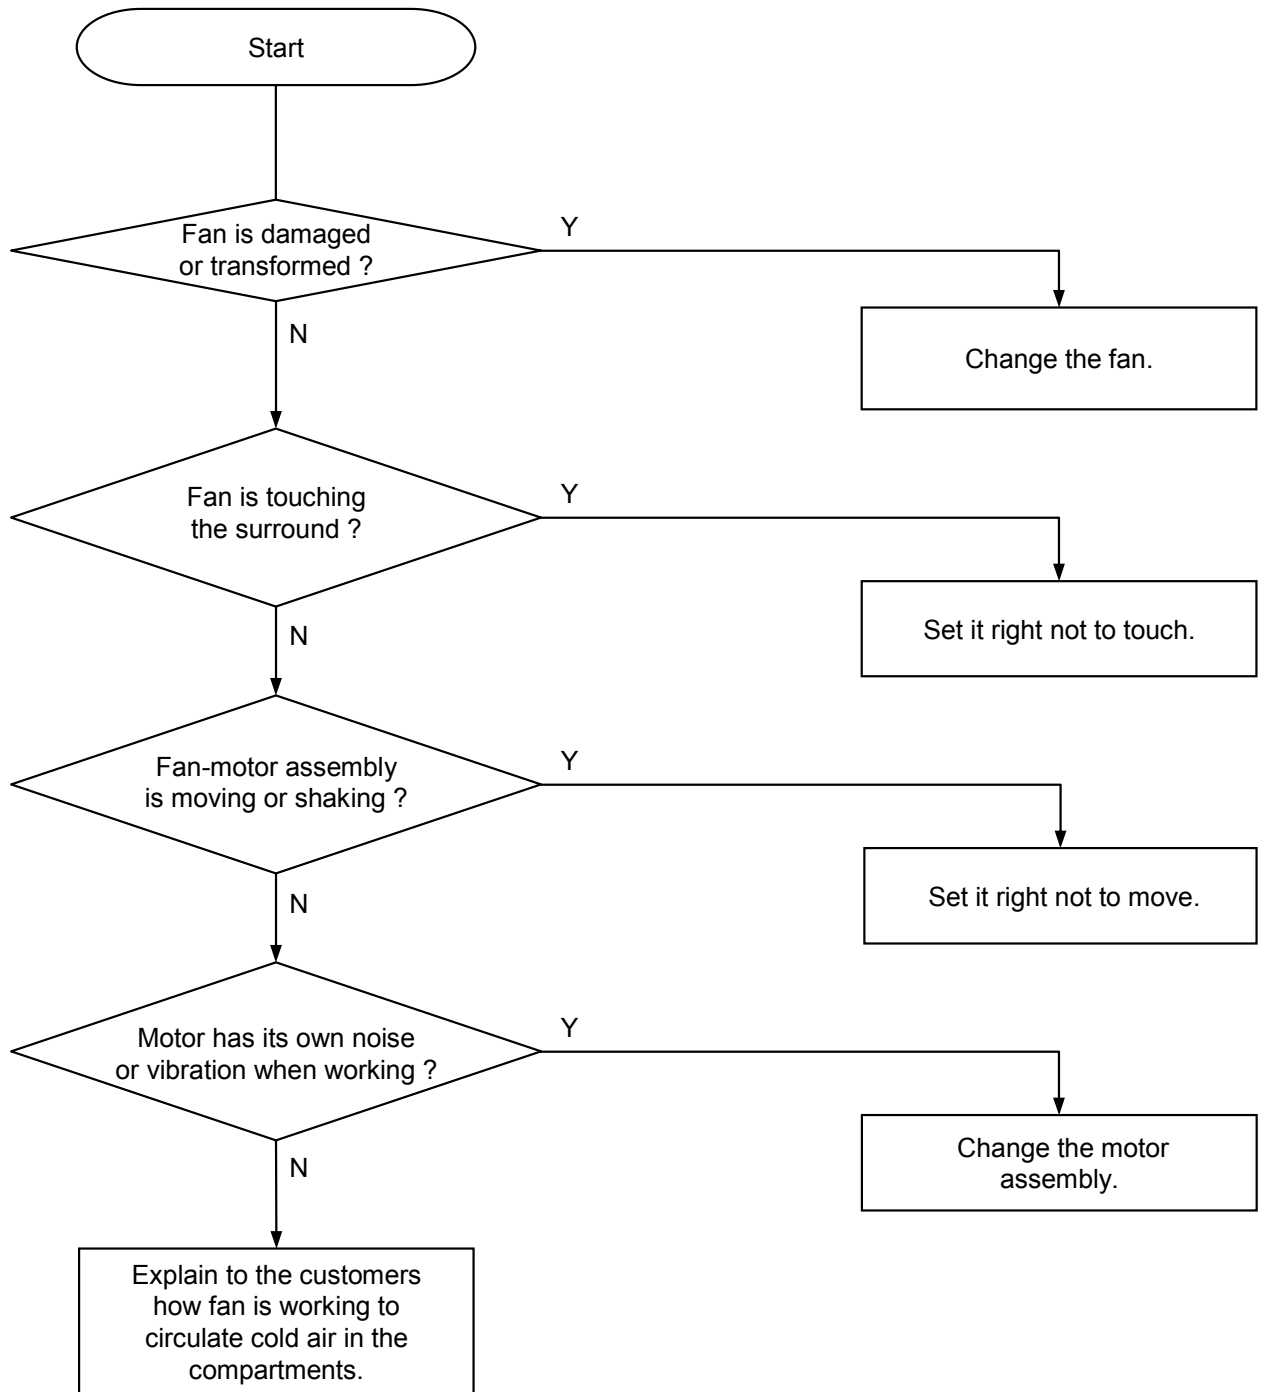

Remarks
● The fan is sending out cold air to circulate it through the compartments. When the air is touching the surface of louver or liner wall, such sound can make.

Troubleshooting of Fan Noise

1. Fixing or Fastening of Fan Motor

1) Check if fan motor frame of the assembly is fastened tightly with screws to the liner wall. Unless it is tight, vibration of shaking can make.

2) Check if fan motor and fan are hanged down. Fan working sound can be louder if they are not set right.

2. Any Touch Sound from Fan
1) Check if sealing sponge on the insulator touches the fan. If so, set it again not to touch it.

2) If any damage on the insulator around the fan rotation is found, set the fan motor assembly right not to touch it.

9-4-4. Pipe Noise

                    └─────────────────┘
```

Remarks
● Refrigerant is erupting rapidly from the compressor to circulate pipes, so pipe shaking noise can make to some degree. ● In case compressor vibration is sent to a pipe directly, apply vibration absorber rubbers to welding points of the pipe and comp. or to a much bent point on the pipe.

10. COOLING CYCLE HEAVY REPAIR

10-1. Summary of Heavy Repair
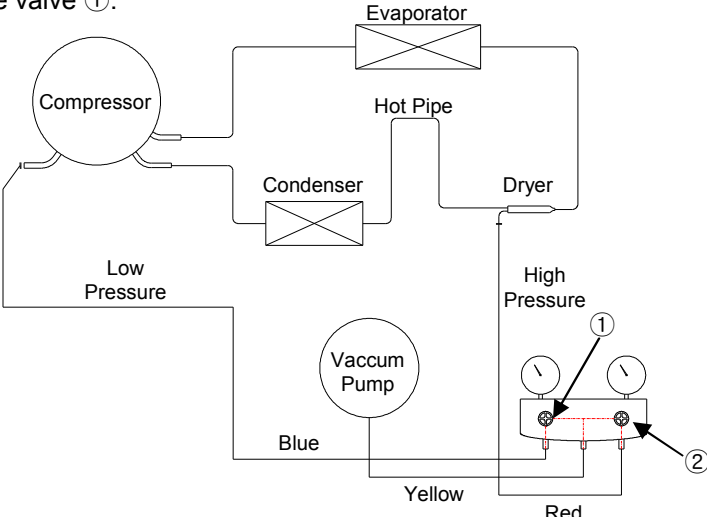

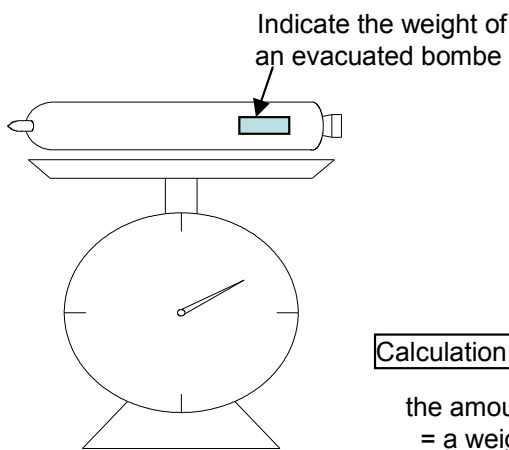

| Process	Contents	Tools
Remove refrigerant Residuals	* Cut charging pipe ends (Comp. & Dryer) and discharge refrigerant from drier and compressor.	* Nipper, side cutters
Parts replacement and welding	* Confirm refrigerant (R-134a or R-600a) and oil for compressor and drier. * Confirm N2 sealing and packing conditions before use. Use good one for welding and assembly. * Weld under nitrogen gas atmosphere. * Repair in a clean and dry place.	* Pipe Cutter, Gas welder, N2 gas
Vacuum	* Evacuate for more than forty minutes after connecting manifold gauge hose and vacuum pump to high (drier) and low (compressor) pressure sides.	* Vacuum pump , Manifold gauge.
Refrigerant charging and charging inlet welding	* Weigh and control the bombe in a vacuum conditions with electronic scales and charge through compressor inlet (Process tube). * Charge while refrigerator operates). * Weld carefully after inlet pinching.	* Bombe (mass cylinder), refrigerant manifold gauge, electronic scales, punching off flier, gas welding machine
Check refrigerant leak and cooling capacity	* Check leak at weld joints. Note :Do not use soapy water for check. * Check cooling capacity → Check condenser manually to see if warm. → Check hot pipe manually to see if warm. → Check frost formation on the whole surface of the evaporator.	* Electronic Leak Detector, Driver.
Compressor compartment and tools arrangement	* Remove flux from the silver weld joints with soft brusher wet rag. (Flux may be the cause of corrosion and leaks.) *Clean tools and store them in a clean tool box or in their place.	* Copper brush, Rag, Tool box
Transportation and installation	* Installation should be conducted in accordance with the standard installation procedure. (Leave space of more than 5 cm from the wall for compressor compartment cooling fan mounted model.)	

10-2. Precautions During Heavy Repair

Items	Precautions
Use of tools.	1) Use special parts and tools for R-134a or R-600a
Removal of retained refrigerant.	1) Remove retained refrigerant more than 5 minutes after turning off a refrigerator. (If not, oil will leak inside.) 2) Remove retained refrigerant by cutting first high pressure side (drier part) with a nipper and then cut low pressure side. (If the order is not observed, oil leak will happen.) Low pressure side Evaporator Suction tube Compressor Hot Pipe Dryer Process tube Discharge tube Condenser High Pressure side
Replacement of drier.	1) Be sure to replace drier when repairing pipes and injecting refrigerant.
Nitrogen blowing welding.	1) Weld under nitrogen atmosphere in order to prevent oxidation inside a pipe. (Nitrogen pressure : 0.1~0.2 kg/cm2.)
Others.	1) Nitrogen only should be used when cleaning inside of cycle pipes inside and sealing. 2) Check leakage with an electronic leakage tester. 3) Be sure to use a pipe cutter when cutting pipes. 4) Be careful not the water let intrude into the inside of the cycle.

10-3. Practical Work for Heavy Repair

| Items	Precautions
1. Removal of residual refrigerant.	1) Remove residual refrigerant more than 5 minutes later after turning off the refrigerator. (If not, compressor oil may leak inside.) 2) Remove retained refrigerant slowly by cutting first high pressure side (drier part) with a nipper and then cut low pressure side. Low pressure side — Evaporator — Suction tube — Compressor — Hot Pipe — Dryer — Process tube — Discharge tube — Condenser — High Pressure side
2. Nitrogen blowing welding.	Low pressure side — Evaporator — ① — Compressor — Hot Pipe — ④ — Dryer — Process tube — ② — Condenser — High Pressure side — ③ *** When replacing a drier:** Weld ① and ② parts by blowing nitrogen (0.1~0.2kg/cm2) to high pressure side after assembling a drier. *** When replacing a compressor:** Weld ③ and ④ parts by blowing nitrogen to the low pressure side. Note) For other parts, nitrogen blowing is not necessary because it does not produce oxidized scales inside pipe because of its short welding time. **※ KEYPOINTING** Welding without nitrogen blowing produces oxidized scales inside a pipe, Which affect on performance and reliability of a product.

Items	Precautions
3.Vacuum degassing.	*** Pipe Connection** Connect a red hose to the high pressure side and a blue hose to the low pressure side. *** Vacuum Sequence** Open ①,② valves and evacuate for 40 minutes. Close valve ①. **※ KEYPOINTING** 1) If power is applied during vacuum degassing, vacuum degassing shall be more effective. 2) Operate compressor while charging refrigerant. (It is easier and more certain to do like this.)

4.Refrigerant charging.	*** Charging sequence**
	1) Check the amount of refrigerant supplied to each model after completing vacuum degassing.
	2) Evacuate bombe with a vacuum pump.
	3) Measure the amount of refrigerant charged.
	  - Measure the weight of an evacuated bombe with an electronic scale.
	  - Charge refrigerant into a bombe and measure the weight. Calculate the weight of refrigerant charged into the bombe by subtracting the weight of an evacuated bombe.
	
	Indicate the weight of an evacuated bombe
	
	※ KEYPOINTING
	1) Be sure to charge the refrigerant at around 25°C.
	2) Be sure to keep -5g in the winter and +5g in summer.
	
	Calculation of amount of refrigerant charged
	
	the amount of refrigerant charged
	= a weight after charging
	- a weight before charging
	(a weight of an evacuated cylinder)

Items	Precautions
4.Refrigerant charging.	4) Refrigerant Charging Charge refrigerant while operating a compressor as shown above. 5) Pinch a charging pipe with a pinch-off plier after completion of charging. 6) Braze the end of a pinched charging pipe with copper brazer and take a gas leakage test on the welded parts. Compressor Evaporator Hot Pipe Bombe Condenser Dryer
5. Gas-leakage test	* Take a leakage test on the welded or suspicious area with an electronic leakage tester.
6. Pipe arrangement in each cycle	* Check each pipe is placed in its original place before closing a cover back-M/C after completion of work.

10-4. Standard Regulations for Heavy Repair

1) Observe the safety precautions for gas handling.

2) Use JIG (or wet towel) in order to prevent electric wires from burning during welding.

   (In order to prevent insulation break and accident.)

3) The inner case shall be melted and insulation material (polyurethane) shall be burnt

   if not cared during welding inner case parts.

4) The copper pipe shall be oxidized by overheating if not cared during welding.

5) Not allow the aluminum pipes to contact to copper pipes. (In order to prevent corrosion.)

6) Make sure that the inner diameter should not be distorted while cutting a capillary tube.

7) Be sure that a suction pipe and a filling tube should not be substituted each other during welding.

  (High efficiency pump.)

11. INSTALLATION GUIDE
11-1. Installation Preparation

Check if the refrigerator can pass a doorway or enter a door first.

Dimensions(including Door Handles)
(Width*Depth*Height)   903mm X 734.5mm X 1790mm
**Find a suitable place to install**

Sufficient space from refrigerator back to the
※wall for free air ventilation

More than 5 cm

More than 5 cm

More than 5 cm

※Avoid direct sunlight.

Note Once the installation place is ready follow the installation instructions.
If surround temperature of refrigerator is low (below 10℃)),
foods can be frozen or the refrigerator can work in abnormal way.
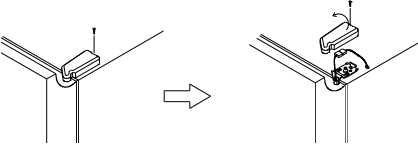

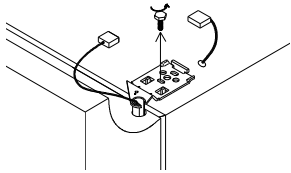

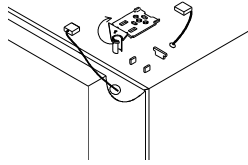

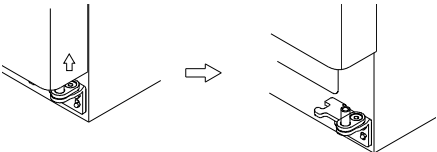

11-2. If the refrigerator can not enter the door

Removing Freezer Door ※Remove front bottom cover first, if it is attached.

1 Remove front bottom cover first, Pull out the left collar of the coupling first, then hold the coupling and pull out the left water tube.

2 Unscrew top hinge cover with a screw driver. Remove the hinge cover.

3 Turn top hinge bolt counterclockwise . Disconnect the harness wires.

4 Lift up the front of hinge to remove. (After the hinge is removed the door can fall down forward. Be careful !)

5 Be careful not to damage the water line when removing the door.

Removing Refrigerator Door

1 Unscrew top hinge cover with a screw driver. Remove the hinge cover.

2 Turn top hinge fastener counterclockwise. Disconnect harness wires.

3 Lift up the front of hinge to remove. (After the hinge is removed the door can fall down forward. Be careful !)

4 Lift the door straight up to remove.

Replacing Freezer Door

1 Insert the water tube into the hole Of the bottom hinge pin first, then Insert the bottom of freezer door Into the bottom hinge pin.
2 Insert the bottom hole of freezer door straight to the bottom hinge pin.
3 Let the top of door close to the cabinet and insert the top hinge pin to the top hole of freezer door. (Insert the back of hinge to the groove of protrusion first, then front to the top hole of door.)
4 Turn the hinge fastener tightly to The end.
Connect harness wire and screw ground wire.
5 Insert the water tube far into the coupling.
Replacing Refrigerator Door

1 Insert the bottom hole of refrigerator door straight to the bottom hinge pin.
2 Let the top of door close to the cabinet and insert the top hinge pin to the top hole of refrigerator door.
(Insert the back of hinge to the groove of protrusion first, then front to the top hole of door.)
3 Turn the hinge fastener tightly to the end.
Connect harness wirings and screw ground wire.
Click and screw the top hinge cover.

83
11-3. Refrigerator Leveling & Door Adjustment

※Refrigerator must be level in order to maintain optimal performance and desirable front appearance.
  (If the floor beneath the refrigerator is uneven, freezer and refrigerator doors look unbalanced.)

In case freezer door is lower than refrigerator door	**In case refrigerator door is lower than refrigerator door**
Insert a screw driver (flat tip) into a groove of the left wheel (bottom of freezer) and turn it clockwise until the door is balanced. (clockwise to raise freezer door ; counterclockwise to lower)	Insert a screw driver (flat tip) into a groove of the right wheel (bottom of refrigerator) and turn it clockwise until the door is balanced. (clockwise to raise refrigerator door ; counterclockwise to lower)
Caution The front of refrigerator needs to be higher just a little than the back for easy door closing, but if the wheel is raised too much for door balance, i.e. front of refrigerator is too higher than the back, it can be difficult to open the door.

11-4. Water Line Installation

How to install Water Line

1. The water pressure should be 3kgf/cm2 or more to run the automatic icemaker.
   ※ Checkup your tap water pressure ; if a cup of 180cc is full within 10 seconds, the pressure is OK.
2. When installing the water tubes, ensure they are not close to Any hot surface.
3. The water filter only "filters" water ; it does not eliminate any bacteria or microbes.
4. If the water pressure is not so high to run the icemaker, call the local plumber to get an additional water pressure pump.
5. The filter life depends on the amount of use. We recommend you replace the filter at least once every 6months.
   ※ When attaching the filter, place it for easy access (removing & replacing)
6. After installation of refrigerator and water line system, select [WATER] on your control panel and press it for 2~3 minutes to supply water into the water tank and dispense water.
7. Use sealing tape to every connection of pipes/tubes to ensure there is no water leak.
8. The water tube should be connected to the cold water line.

WATER SUPPLY KIT

※ Check the parts below for installing water supply. Some other necessary parts are available at your local service agents.

Connector A,B,C

Rubber Packing (3014454510)

Holder (3012020700)

Screw × 4ea (7112401211)

Fastener A × 3ea (3011202000)

Filter Box (3010541600)

Water tube A/B
(A:3019503200
B:3019503300)
Installation Procedure

1. Join connector to water tap

1) First lock the main tap water valve.
   Check if connector B and C has its own rubber packing ring in it.
2) Join Connector C to the water tap, then Connector B to connector C with a wrench or spanner.
3) Insert water pipe into Connector-B and join Connector-A with a wrench or spanner.
4) In case Connector-C does not fit water tap join Connector-B directly to the tap. (See Figure B.)
   ※ If no connector fits water tap, call your local service.
5) Unlock main tap water valve, open tap water and check if any water leaks on each joins.

Place the rubber washer inside the tap connector and screw onto the water tap.

<Figure A>

Tap

Connector A   Connector B

Rubber Packing
2. Get ready to install water line

1) Measure an approximate distance between the filter and the Water Tube and cut the tube off filter vertically.
2) Connect the tubes to the filter as the figure shows.

Leave a sufficient distance when cutting the tubes.

Tap Side

Water Tube

Filter Box

Keep right angle

Ref Side
3. Remove any substance from filter

1) Open the main tap water valve and check if water comes out of the Water Tube.
2) Check if the Water Valve is open in case water does not come out.
3) Leave the valve open until clean water is coming out.
 ※ Initial water may contain some substances out of filter (manufacturing process).
4. Attach the filter box

1) Screw and fasten the filter holder to the left/right side of the back of refrigerator.
 ※ In case the holder is not fastened well, remove the back paper of the tape on the filter holder and attach it.
2) Insert the filter box into the holder.
5. Connect water tube

1) Remove the rear cover at the bottom back of the refrigerator.
2) Insert the fastening ring into the Water tube.
  (Be careful to follow the direction of the nut.)
3) Insert the Water Tube into the top of Water Valve, turn the nut clockwise to fasten it. (The Water valve is to the right of the motor.)
4) Check for any bent tubes or water leaks; if so, re-check instalation procedure.
5) Replace the rear cover. (The Water Tube should be placed between the groove of the refrigerator back and motor cover.)
Set the tube upright as the figure shows.

6. Fasten water tube

1) Fasten the Water Tube with the [Fastener A] .
2) Check if the tube is bent or sqeezed. If so, set it right to prevent any water leak.
7. After installation

1) Plug the refrigerator, press the [WATER] button on the control panel for 2~3 minutes to remove any air (bubble) in the pipes and drain out the initial water.
2) Check the water leak again through the water supply system (tubes, connectors and pipes) Rearrange the tubes again and do not move the refrigerator.
11-5. Dispenser Water Flow
